Professional Summary

Highly motivated Computer Science undergraduate at VIT Bhopal specializing in **Cybersecurity and Digital Forensics**. Hands-on experience in penetration testing, vulnerability assessment and penetration testing (VAPT), network security, and building system-wide defense suites. Skilled in analyzing malicious network traffic and exploit vectors while applying frameworks such as the OWASP Top 10, NIST Cybersecurity Framework, and ISO/IEC 27001. Seeking to leverage a strong offensive security mindset and hands-on tool expertise in Ethical Hacking, VAPT, and Digital Forensics as an intern at Mitigata Security, Bengaluru.

Education

VIT Bhopal University	Bhopal, India
B.Tech – Computer Science & Engineering (<i>Cybersecurity & Digital Forensics</i>)	2023 – 2027
Current CGPA: 7.94	

Technical Skills

- **Offensive Security & VAPT:** Ethical Hacking, Penetration Testing, Vulnerability Assessment and Penetration Testing (VAPT), Web Application Security (OWASP Top 10), Network Security, Network VAPT, Mobile Application Security (Android/iOS), Reconnaissance, Threat Analysis, Digital Forensics, Incident Response
- **Security Tools:** Burp Suite, Nmap, MobSF, Wireshark, Metasploit, Hashcat, SQLmap, Kali Linux, Parrot OS
- **Frameworks & Compliance:** NIST Cybersecurity Framework, ISO/IEC 27001, OWASP Top 10, Data Privacy Techniques, Risk Assessment
- **Programming & Scripting:** Python, Bash Scripting, Java, JavaScript, Node.js, React.js
- **Machine Learning:** Intrusion Detection, Classification Models, Feature Selection, Data Preprocessing
- **Operating Systems:** Linux (Kali), Windows

Projects

HyperLink Sentinel – System-Wide Phishing & Quishing Defense Suite	Cyber Carnival 2026
---	----------------------------

- Architected a cross-platform desktop application using Electron.js and React.js that operates outside the traditional browser sandbox to intercept malicious URLs directly from the system clipboard and desktop applications.
- Integrated Google Safe Browsing and VirusTotal APIs to power a multi-layer threat analysis engine, enabling real-time static and syntax-based malicious URL detection.
- Built an anti-quishing drag-and-drop QR code scanner to detect malicious QR codes before execution.
- Developed a zero-exposure headless Puppeteer preview sandbox to safely render suspicious links without exposing the host system to risk.

Intrusion Detection System Using Machine Learning

- Built and deployed a machine learning-based Network Intrusion Detection System (NIDS) using the KDD Cup dataset to monitor, categorize, and classify anomalous or malicious live network traffic.
- Developed high-accuracy classification models to detect diverse network attack vectors including DoS, Probe, R2L, and U2R attacks.
- Refined feature selection and data preprocessing methodologies to reduce false positive rates and improve model accuracy.

Image Steganography for Data Privacy

- Engineered an image steganography framework for secure, un-interceptable data communication by embedding sensitive payloads inside high-resolution 512 x 512 graphical images.
- Optimized structural embedding algorithms to achieve high payload capacity with negligible visual distortion.
- Evaluated algorithmic resiliency of the framework against automated baseline steganalysis attacks to validate data security.

Certifications & Professional Development

- **AWS Certified Solutions Architect – Associate**
- **Google IT Support Professional Certificate**
- **ServiceNow System Administration Fundamentals – On-Demand Course**
